

The only Planner you need!

# **PROJECT FEATURES / USER STORY**

#### **PLANNER**

- A Five-Day Planner
- 9am 5pm
- Allowing Entries to be Saved

## WEATHER

- Display the Weather for the Day
- Ability to Toggle the Weather
- For the Users Location

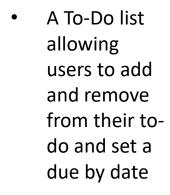

# QUOTE FOR THE DAY

 Displays a different quote each time the page is reloaded

# ON THIS DAY IN HISTORY

 Displays a fact about this day in history based upon the current date

## **TODO LIST**

TO DO LIST

# **Technologies Used**

**PlanIT Project uses the above Technologies** 

## THE TEAM & RESPONSIBILITIES:

#### **ARSHAD**

- RefactoringDailyScheduleCode Base
- Todo List
- Code Testing

#### **EBHETOA**

- Quotes API
- Daily Fact API
- Code Testing

#### **STUART**

- Initial Code Base
- ProjectManagement
- PowerPoint
  Presentation
- Wireframes
- ProjectReadme

#### **FADUMA**

- Weather API
- Code Testing
- ProjectReadme

#### **EVERYONE**

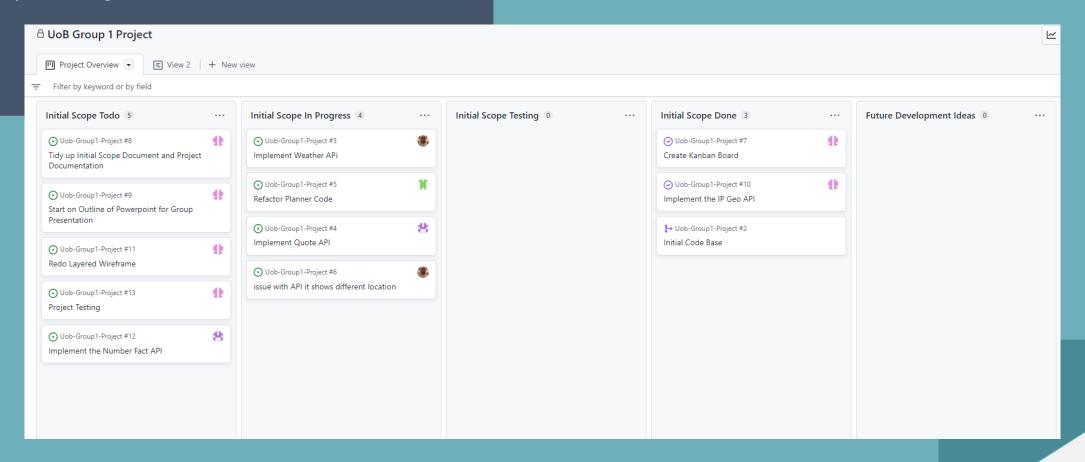

- Daily StandUp
- GitHub Commits /

Merges

- GitHub Issues
- ProjectPresentationPreparation

# **PROJECT MANAGEMENT**

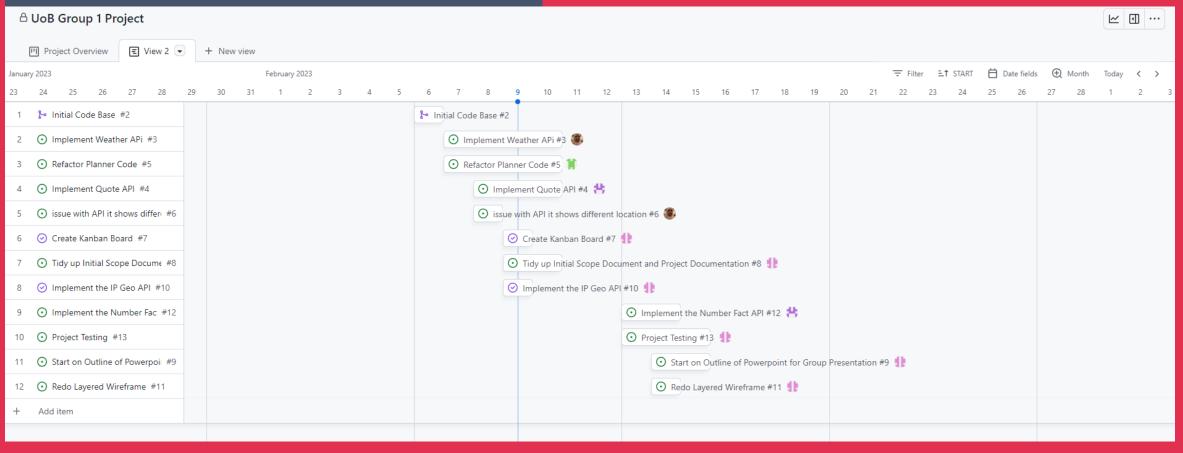

We have used the SCRUM Methodology & Scrum Project Management.

# **PROJECT MANAGEMENT**

We have used the SCRUM Methodology & Scrum Project Management.

# **PROJECT MANAGEMENT**

We have used the SCRUM Methodology & Scrum

## ARSHAD

## **Challenges:**

- Understanding someone else's code
- Refactor to understandable and efficient code
- The move from one day to five-day planner
- Implementing a modal was new to me
- Reorganizing local storage to an array model

#### Tasks:

- Refactor Initial Code Base
- Extend the project from a one-day planner to a five-day planner
- Extend the project to include a to-do list

#### **Overcoming Challenges:**

- Breaking down into modular form, introducing functions and applying the DRY principle
- Reducing the code base by 50%
- Designing a concept of a token to maintain the position of the day displayed, whilst retaining the current date.

## **Project Overall - Feelings**

- Enjoyed the project, opportunity to be creative, learn and research more
- Liked exploring how we could develop and extend the project in terms of functionality and features
- Happy that we created a project that is scalable and could be easily extended in the future
- Enjoyed the thought process and seeing the evolution of the project, even enjoyed the pressure

## **EBHETOA**

## **Challenges:**

- Finding the Right APIs
- Remembering how to apply what we have learned during the class

#### Tasks:

- Implement a Daily Quote
- Implement a Daily Fact
- Add the Project Logo to the Layout
- Code Testing

#### **Overcoming Challenges:**

- Working with my team to overcome challenges, communication was key
- Making decisions together as a team
- Having clear goals, timelines, and responsibilities

## **Project Overall - Feelings**

- Thoroughly enjoyed the project
- Was a great experience in not only coding but also working within a development team
- Happy that I am now more confident at handing programming challenges

# STUART

## Challenges:

- Learning the Project Management tools on GIT
- Keeping the team together, managing bitesize chunks, to bring the project together
- Dealing with GIT issues (problems)
- Resolving technical difficulty with YouTube / Chrome

## Project Overall - Feelings

- Really enjoyed the project and working within the group
- Excited to see what we have produced, and how it could be easily developed in future because of the methods used.
- Very happy with increased GIT knowledge both from managing repository, and also project management tools.

#### Tasks:

- Initial Code Base from the Challenge
- Project Management
- Git Management
- Presentation / Video / Logo
- Resolving coding issues

## **Overcoming Challenges:**

- Learning / Research
- Effective Communication and Management
- Logical thinking through problems

## FADUMA

## Challenges:

 Working with the Weather API and toggling between Celsius and Fahrenheit

#### Tasks:

- Implement the Weather API
- Implement a modal toggle between Celsius and Fahrenheit
- Add a footer to the Project
- Produce the Readme for the Project

## **Overcoming Challenges:**

- Used class notes, research and videos to refresh knowledge
- Communicating with other team members
- Using GIT

#### Project Overall - Feelings

- Feels proud of the final product the team has created
- A sense of accomplishment that our app could be used daily in peoples lives
- Working with the PlanIT team members was a fantastic experience
- Happy to learn new skills and improve existing knowledge, a rewarding project

We will take Questions at the End of the Presentation

- Weather API by OpenWeatherMap
- Moment.JS library by momentjs.com
- Bootstrap

We would like to take any Questions that you have

**Or Observations** 

Or Suggestions on what additional features you would like to see

Or how you would have done things differently

We thank you for your time in watching our presentation and demonstration.
